

CO-BOTIC™ 1700 AUTOMATIC CLEANING VACUUM CLEANER

Co-Botic™ 1700 clearly confirms high efficiency, ease of use and flexibility to adapt to different conditions.

We are proud to present to you our tests conducted with the **Co-Botic™ 1700**, which clearly demonstrate that the robot definitely deserves positive evaluations.

The Co-Botic™ 1700 is an automatic vacuum cleaner that not only **supports human labor**, but also effectively **reduces the overall workload** by performing repetitive and time-consuming tasks.

The unit is available in three versions, allowing it to be tailored to each customer's individual needs and specific surfaces. This flexibility means that the Co-Botic™ 1700 can work effectively in a wide variety of conditions, offering optimal cleaning results.

The Co-Botic™ 1700 can run for an impressive **270 minutes on a single charge**. If a customer needs the robot to run even through the night, no problem - an extra **battery in the device's inventory** takes care of that. As an added bonus, the Co-Botic can even be used in dark areas, allowing the robot to effectively clean for extended periods of time without supervision.

One of the key features that sets the Co-Botic™ 1700 apart is this **compact charging station**. It automatically returns to it when it finishes cleaning or when it needs recharging, making it extremely convenient and practical to operate the robot.

Undoubtedly, the ability to **program the robot using a dedicated app** is also a great convenience. This allows for even greater flexibility and customization of the robot's operation to meet the specific needs of the user.

The conclusions of our tests clearly indicate that the **Co-Botic™ 1700** is not only an innovative device, but also a reliable partner in cleaning. Its functionality, performance and ease of use make it deserve a strong "YES" in terms of efficiency, convenience of use and flexibility.
