

SANZONATE

Aquaflow Sanzonate™ is a NAO ozonized water generator. It is an ideal solution for office and social areas.

WHAT IS IT?

This method uses cold tap water and saturates it with ozone to create an aqueous solution of this gas. Ozone, a **naturally occurring gas, has strong aseptic and oxidizing properties.** SANZONATE'S™ patented technology creates an active solution that contains a very high stable concentration of ozone dissolved in water in the form of NANOBUBBLES (NAO).

We can offer a version to mount on the wall or to place on a stand.

Requires running water and electricity, suitable for refueling sprayers, buckets and cleaning machines.

The replacement component is the dehumidifier, which has an estimated life of about three months.

BENEFITS FOR YOU

- Very high cleaning and disinfection efficiency - 99.999% reduction in the test for germicidal disinfectants according to EN 1276
- Elimination of traditional cleaning agents and their negative impact on washed surfaces (erosion and destruction of floors, stickiness and slipperiness)
- Additional sanitizing effect (odor elimination), ease of use and optimized cleaning process
- Positive impact on environmental protection and reduction of carbon footprint (packaging, waste water, etc.)
